"Besides the beguiling story, the affable illustrations of the smiling Gloria, the accidental mayhem in the background, and the myriad safety tips -- such as 'always pull the toothpick out of your sandwich' and 'never lick a stop sign in the winter' -- add to the enjoyment. A glorious picture book." -- The Horn Book "Rathmann is a quick rising star in the world of children's books. In this book, she again shows her flair for creating real characters, dramatic situations and for knowing what will make young audiences giggle and think." -- Children's Book Review Magazine "Rathman brings a lighter-than-air comic touch to this outstanding, solid-as-a-brick picture book." -- Publisher's Weekly "A five-star performance." -- School Library Journal

Ted and his friends are upset about an upcoming history test. He is nervous about getting a bad grade, and his friends have other priorities. When one friend sees the answer key, Ted is offered the chance to cheat but refuses. He gets a bad grade and is disappointed. Later that night, he get a mysterious text message asking him if he would like a do-over. He accepts and relives the same day, this time accepting his friends' offer to cheat. He scores better on the test, but will the cheating pay off in the long run?

Considered by many to be mentally retarded, a brilliant, impatient fifth-grader with cerebral palsy discovers a technological device that will allow her to speak for the first time.

The untold story of the historic voyage to the moon that closed out one of our darkest years with a nearly unimaginable triumph In August 1968, NASA made a bold decision: in just sixteen weeks, the United States would launch humankind's first flight to the moon. Only the year before, three astronauts had burned to death in their spacecraft, and since then the Apollo program had suffered one setback after another. Meanwhile, the Russians were winning the space race, the Cold War was getting hotter by the month, and President Kennedy's promise to put a man on the moon by the end of the decade seemed sure to be broken. But when Frank Borman, Jim Lovell and Bill Anders were summoned to a secret meeting and told of the dangerous mission, they instantly signed on. Written with all the color and verve of the best narrative non-fiction, Apollo 8 takes us from Mission Control to the astronaut's homes, from the test labs to the launch pad. The race to prepare an untested rocket for an unprecedented journey paves the way for the hair-raising trip to the moon. Then, on Christmas Eve, a nation that has suffered a horrendous year of assassinations and war is heartened by an inspiring message from the trio of astronauts in lunar orbit. And when the mission is over!after the first view of the far side of the moon, the first earth-rise, and the first re-entry through the earth's atmosphere following a flight to deep space!the impossible dream of walking on the moon suddenly seems within reach. The full story of Apollo 8 has never been told, and only Jeffrey Kluger!Jim Lovell's co-author on their bestselling book about Apollo 13!can do it justice. Here is the tale of a mission that was both a calculated risk and a wild crashshoot, a stirring account of how three American heroes forever changed our view of the home planet.

Standardized test-taking skills for reading, math and language for grade 8.

This book is about wellness and well-being and is meant to serve different groups of people in specialized ways. There is a widening health care information gap between health consumers and care providers. The material presented here bridges the gap between laypeople as health care consumers and medically oriented health care providers, with detailed natural healing information based on medical and scientific knowledge.

Learn how to use R to turn raw data into insight, knowledge, and understanding. This book introduces you to R, RStudio, and the tidyverse, a collection of R packages designed to work together to make data science fast, fluent, and fun. Suitable for readers with no previous programming experience, R for Data Science is designed to get you doing data science as quickly as possible. Authors Hadley Wickham and Garrett Grolemund guide you through the steps of importing, wrangling, exploring, and modeling your data and communicating the results. You'll get a complete, big-picture understanding of the data science cycle, along with basic tools you need to manage the details. Each section of the book is paired with exercises to help you practice what you've learned along the way. You'll learn how to: Wrangle!transform your datasets into a form convenient for analysis Program!learn powerful R tools for solving data problems with greater clarity and ease Explore!examine your data, generate hypotheses, and quickly test them Model!provide a low-dimensional summary that captures true "signals" in your dataset Communicate!learn R Markdown for integrating prose, code, and results

There continues to be a vigorous public debate in our society about the status of climate science. Much of the skepticism voiced in this debate suffers from a lack of understanding of how the science works - in particular the complex interdisciplinary scientific modeling activities such as those which are at the heart of climate science. In this book Eric Winsberg shows clearly and accessibly how philosophy of science can contribute to our understanding of climate science, and how it can also shape climate policy debates and provide a starting point for research. Covering a wide range of topics including the nature of scientific data, modeling, and simulation, his book provides a detailed guide for those willing to look beyond ideological proclamations, and enriches our understanding of how climate science relates to important concepts such as chaos, unpredictability, and the extent of what we know.
