Derivatives in emerging markets

Derivatives markets for EME currencies and interest rates tend to be much smaller than their advanced economy counterparts, in relation to both GDP and trade. EME derivatives markets are also limited to a narrower set of instruments, and a disproportionate part of trading takes place over the counter.

In postcrisis Asia, the development of domestic bond markets is increasingly seen as one of the key requirements to strengthen the financial sectors of East Asian countries and to reduce their vulnerabilities to future financial crises. There is a great diversity in terms of the level of bond market development across East Asian countries. Judged by several indicators of bond market development, Hong Kong, China and Singapore are ahead of other countries, followed by a second tier consisting of Korea; Malaysia; and Taipei, China and a third tier consisting of People's Republic of China, Philippines, and Thailand. Indonesia's bond market is perhaps the most nascent among East Asian bond markets. Initiatives to develop bond markets in East Asia should focus on: (i) sustaining a stable macroeconomic environment with low inflation and stable interest rates, (ii) developing a healthy government bond market that would serve as a benchmark for the corporate bond market, (iii) completing the postcrisis agenda of banking sector restructuring, (iv) improving corporate governance, (v) strengthening the regulatory framework for bond market, (vi) rationalizing tax treatment of bonds, (vii) broadening the investor base, and (viii) promoting the growth of regional bond market centers. Since at present there is a great diversity in the levels of bond market development across countries, significant country-specific deciphering of these requirements will be needed for developing country strategies for bond market development.

Since late 2002 there have been many disputes and discussions around the world on whether or not the Chinese yuan (CNY), or renminbi (RMB), should be revalued. Based on various arguments and discussions, the CNY has been expected to be revalued worldwide, as evidenced by the significant premiums for the CNY non-deliverable forwards in the offshore marketplace. With the CNY revaluation perspectives, hundreds of billions of US dollars have been invested in various types of CNY-related derivatives products. The purpose of this book is not to tell the reader whether the RMB should be revalued, or by how much it should be revalued, as these questions are the work of economists. Instead, as a derivatives specialist with more than ten years' experience in the international financial market and with working experience in China in the past few years, the author presents trading of CNY-related derivatives products in the offshore marketplace. The book is organized into five parts. The first part familiarizes readers with the Chinese economy in transition and the Chinese financial market,

so that they can make their own judgment as to whether or not the CNY should be revalued. Part II presents major foreign exchange derivatives trading in organized exchanges and the over-the-counter marketplace around the world. Part III reviews what foreign exchange products were involved both before and during the Asian financial crisis, because many of them were used to speculate or hedge against devaluations of the Asian currencies. Part IV studies various CNY-related derivatives products and embedded derivatives products. Finally, Part V examines the possible impacts of these derivatives products on the CNY exchange rate, based on the experiences of other currencies such as the Korean won and the New Taiwan dollar.

Provides a comprehensive survey of the East Asian bond markets, identifies best practices for fostering their development, and presents a broad agenda for further reforms. East Asia's spectacular economic performance over the past several decades has been marked by macroeconomic stability, consistent growth, low inflation, the lowering of trade barriers, and an overall improvement in living standards. The region now has a well developed banking system and boasts four of the top 20 stock markets in the world. Its bond markets, however, are relatively small and at an early stage of development. This report provides a comprehensive survey of the East Asian bond markets, identifies best practices for fostering their development, and presents a broad agenda of reforms for their further development. The report, which is based on studies of bond markets in China, Hong Kong, Indonesia, the Republic of Korea, Malaysia, the Philippines, Singapore, and Thailand, finds great diversity among those markets. It was presented at the Emerging Asian Bond Market Conference, co-sponsored by the World Bank and the Hong Kong Monetary Authority and held in Hong Kong, June 26-27, 1995. It is believed that with the proper institutional prerequisites in place, the markets will grow very rapidly and become a leading source of financing for the region. "The [study] and this conference mark the World Bank's increasing support and participation in the development of bond markets in the region." --Joseph Yam, Chief Executive, Hong Kong Monetary Authority

This second edition, now featuring new material, focuses on the valuation principles that are common to most derivative securities. A wide range of financial derivatives commonly traded in the equity and fixed income markets are analysed, emphasising aspects of pricing, hedging and practical usage. This second edition features additional emphasis on the discussion of Ito calculus and Girsanov's Theorem, and the risk-neutral measure and equivalent martingale pricing approach. A new chapter on credit risk models and pricing of credit derivatives has been added. Up-to-date research results are provided by many useful exercises.

Erik Banks, responsible for global risk management at Merrill Lynch in Hong Kong, has written another text on the derivatives field covering innovation in these instruments in Asia Pacific. The text acts as a detailed reference on the nature of these markets and the prospects for the Asian derivative markets, both listed and OTC. He also includes an analysis of the Australian, New Zealand and Japanese markets to fit the emerging markets into context.

The paper makes an assessment of the progress made in developing local debt markets in emerging Asia. Market development has been limited by hurdles confronting borrowers and lenders, current and potential liquidity providers, and insufficient support from government policies and regulations. Besides fostering a credit culture to deepen local debt markets, the issue of critical size can be addressed through

an integrated regional market for local currency bonds that provides greater scale, efficiency, and access. With rapid economic growth in Asia, a key challenge is to generate financial assets that can provide the underlying collateral for expanding fixed-income markets, and hence domestic and regional investment opportunities.

Derivative Products & Pricing consists of 4 Parts divided into 16 chapters covering the role and function of derivatives, basic derivative instruments (exchange traded products (futures and options on future contracts) and over-the-counter products (forwards, options and swaps)), the pricing and valuation of derivatives instruments, derivative trading and portfolio management.

Publisher description

The investor community is constantly looking for new sources of investment opportunity in the form of current income and capital gains. Much of the focus by fund managers, institutional investors and retail investors is currently on the global emerging markets of Asia where over \$1 trillion of infrastructure and development projects will have to be funded over the next decade. In recent months, more institutions have been focusing on the fixed income markets, where returns have been impressive. The text from credit risk authority Erik Banks provides a detailed review of the emerging Asian fixed income markets and their primary instruments, along with a discussion of market participants, market mechanics and associated hedging and financing instruments.

Credit Derivatives Trading & Management of Credit & Default Risk Written by some of the industry's leading names, Credit Derivatives - Trading & Management of Credit and Default Risk provides a comprehensive overview of this increasingly important financial instrument. Credit Derivatives promise to revolutionise the management of credit risk in banking and capital markets. Credit Derivatives will be essential for commercial and investment banks as well as brokers active in credit derivative products; liability and investment managers who utilise or are looking at utilising credit derivatives; consultants, IT firms and accountants active in advising traders or users of these instruments; and, regulatory agencies. It can also be used in practical in-house training programmes as well as in post-graduate programmes such as MBA or Applied Finance courses in credit risk management, either as the primary text or supplementary reading. Credit Derivatives is edited by the author of Swaps & Financial Derivatives, Satyajit Das, who is also the major contributor to the book. There are additional specialist chapters by practitioners drawn from industry leaders including: Citibank Limited Clifford Chance JP Morgan KMV Corporation Moody's Investors Service Price Waterhouse "In a rapidly developing area of finance, where knowledge and information are jealously guarded, this book offers a means of 'getting up to speed' on a topic that may well fundamentally alter the way the banking and investment community handles credit risk." - Mark Schneider, Head of New Markets Société Générale Australia Limited "In his usual style, Das has produced...one of the most extensive discussions of credit derivatives...A must have reference for students and market practitioners alike." - Quentin K. Hills, Head, Derivatives Marketing - Asia Citibank, N.A. "...too often this kind of 'real world' material does not get included in derivatives books...This has the right combination of basic explanation and technical material." - Nick Reed, Director, RVC Associates "...a comprehensive collection of material on...this relatively new field of banking practice." - Ralph Yiehmin Liu, Managing Director, Advanced Risk Management Solutions Pte Ltd
