The international financial community blamed the Asian crisis of 1997–1998 on deep failures of domestic financial governance. To avoid similar crises in the future, this community adopted and promoted a set of international "best practice" standards of financial governance. The G7 asked specialized public and private sector bodies to set international standards, and tasked the International Monetary Fund and the World Bank with their global dissemination. Non-Western countries were thereby encouraged to emulate Western practices in banking and securities supervision, corporate governance, financial disclosure, and policy transparency. In *Governing Finance*, Andrew Walter explains why Indonesia, Malaysia, South Korea, and Thailand—key targets and test cases of this international standards project—were placed under intense pressure to transform their domestic financial governance. Walter finds that the depth of the economic crisis, and more enduring aspects of Asian capitalism, such as family ownership of firms, made substantive compliance with international standards very costly for the private sector and politically difficult for governments to achieve. In spite of international compliance pressure, the result was varying degrees of cosmetic or "mock" compliance. In a

book containing lessons for any agency or country attempting to implement lasting change in financial governance, Walter emphasizes the limits of global regulatory convergence in the absence of support from domestic politicians, institutions, and firms.

This book examines the political economy of the states of Pacific Asia, stretching from Japan to Burma since the end of WWII.

East Asia, until recently the scene of widespread blood-letting, has achieved relative peace. A region that at the height of the Cold War had accounted for around eighty percent of the world's mass atrocities has experienced such a decline in violence that by 2015 it accounted for less than five percent. This book explains East Asia's 'other' miracle and asks whether it is merely a temporary blip in the historical cycle or the dawning of a new, and more peaceful, era for the region. It argues that the decline of mass atrocities in East Asia resulted from four interconnected factors: the consolidation of states and emergence of responsible sovereigns; the prioritization of economic development through trade; the development of norms and habits of multilateralism, and transformations in the practice of power politics. Particular attention is paid to North Korea and Myanmar, countries whose experience has bucked regional trends largely because these states have not succeeded in consolidating themselves to the point where they no longer depend on violence to survive. Although the region faces several significant future challenges, this book argues that the much reduced incidence of mass atrocities in East Asia is likely to be sustained into the foreseeable future.

Examines the factors behind the remarkable success of the East Asian "miracle" economies.

Regional cooperation in East Asia on various issue areas, such as emergency liquidity mechanisms in finance, the exponential growth of free trade agreements and policy coordination on the environment and public health, developed rapidly after the Asian Financial Crisis. A decade later, the global financial crisis offered a new opportunity for the nascent regional cooperation mechanisms to acquire new depth and meaning - this time, however, in a very different context due to the unfaltering rise of China. How have inter-state cooperation mechanisms, which were devised originally to deal with the problems of the past crisis, fared in the recent global economic turbulence? Can regional integration effectively insulate East Asia from the vagaries of the international market? Should East Asian nations heed the call for regionalism or globalism? This volume not only offers one of the first assessments of how the global economic crisis has affected the prospects for regional integration in East Asia, but it also addresses a number of long-standing debates of interest to East Asian specialists, economists and policymakers: Are crises catalysts for revamping developmental models? Do they provide solid foundations for regional solidarity and integration? Can they help catapult countries into the global limelight? This book was originally published as a special issue of *The Pacific Review*.

This book examines Financial regionalism in East Asia has stimulated not only a new architecture for regional governance, but also a transformation in Indonesia's national regulatory framework. As a relatively new phenomenon compared to trade regionalism,

Where To Download Governing Finance East Asias Adoption Of International Standards Cornell Studies In Money

financial regionalism has successfully shaped cooperative networks among financial authorities in East Asia. In this incisive new book, Eko Saputro explores how new financial alliances and regulatory frameworks will allow Indonesia to rapidly take a new place at the global table, bringing the explosive growth that other Asian countries have seen to the archipelago nation. This book will be of equal value to academics, policy makers, students, and scholars, both in the region and abroad.

Several years before the 1997-98 Asian financial crisis, most East Asian economies with the exception of China had engaged in the liberal reform prescriptions of the Washington Consensus. The Asian financial crisis added impetus to the transformation process as the crisis countries accepted the Washington Consensus as part of their commitment to the IMF policy conditionality. In this book the author argues for the continuing validity of an 'East Asian' model of economic development that differs distinctly from the Washington Consensus. He argues that, while this model was undermined to some extent by the 1997-98 financial crisis, it remains robust and important in explaining economic events in East Asia. In doing so, he covers the accomplishments and failures of the East Asian development model and the reform agenda for a new East Asian paradigm for post-crisis development.

Global Financial Governance Confronts the Rising Powers addresses the challenge that the rising powers pose for global governance, substantively and institutionally, in the domain of financial and macroeconomic cooperation. It examines the issues that are before the G20 that are of particular concern to these newly influential countries and how international financial

Where To Download Governing Finance East Asias Adoption Of International Standards Cornell Studies In Money

institutions and financial standard-setting bodies have responded. With authors who are mainly from the large emerging market countries, the book presents rising power perspectives on financial policies and governance that should be of keen interest to advanced countries, established and evolving institutions, and the G20.

In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, *The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution* includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying
