India is short of dense forms of energy. To grow the economy, you need a lot of dense forms of energy. We only have thermal coal, solar and wind and those can be only used if you convert them to electricity. Compared to the global average of 19% as electricity and use, if the world consumes 100 units of energy, 19 units is consumed as electricity.

economy. The institutional parameters are instrumental in this success. However, these mechanisms are limited to few stages of development, giving very little space to the development communities. This book is intended to present the contemporary research outcomes on the cross-cutting theme of development induced displacement. Economic development of frontier and remote regions has long been a central theme of development studies. This book examines the development experience in the northeastern region in India in relation to the processes of globalisation and liberalisation of the economy. Bringing together researchers and scholars, from both within and outside the region, the volume offers a comprehensive and updated analysis of governance and development issues in relation to the northeastern economy. With its multidisciplinary approaches, the chapters cover a variety of sectors and concerns such as land, agriculture, industry, infrastructure, finance, human development, human security, trade and policy. This book will be useful to scholars and researchers of economics, public policy, governance and development, geopolitics, geography, development studies, politics and sociology of development and area studies as well as observers and policymakers interested in the Northeast.

This book revisits some of the persisting challenges of development of India, which remain unresolved even after twenty-five years of economic reforms and almost fifteen years of high growth rate. These include defining purpose of development, inequality, labour, work, unemployment, agrarian distress and migration. The book questions the overemphasis on growth to the extent of neglecting basic issues of development. With a number of contributions re-imagining development and its political economy, the book

discusses above mentioned issues in light of new data and more recent conceptions of the issues. The contributors of this volume are eminent researchers in their respective field. Presenting primary as well as secondary data, the book considers the latest advances and research and also addresses new challenges like the global reorganization of production and the consequences for labour and the world of work, along with skills question. World of work has received detailed investigation in this book. This is a timely addition in existing literature especially in context of pandemic and lockdown. Informality and un/employment question is addressed in this context. Relationship among poverty, inequality and growth is examined in light of newer understanding. Agrarian distress is looked in a broader context. A number of papers are examining migration question by expanding coverage of migration and including labour mobility as apart of migration debate. The present crisis of migrant labour and absence of social security for these workers is also discussed. This book is primarily intended for those interested in recent advances on some of the basic aspects of development, like poverty, inequality, informality, word of work, migration and labour mobility. It is also useful for researchers, policy makers, journalists and civil society organizations working on these issues.

We are witnessing an unprecedented global outbreak of COVID-19, which has been devastating in its consequences. Beyond the acute health hazard, the pandemic has carried with it other threats for mankind associated with the human economy, society, culture, psychology and politics. Amidst these multifarious dimensions of the pandemic, it is high time for global solidarity to save humankind. Human society, its ambient environment, the process of socio-economic development, and politics and power – all are drivers to establish the world order. All these parameters are intimately and integrally related. The interconnections of these three driving forces have a significant bearing on life, space and time. In

parallel, the interrelationship between all these drivers is dynamic, and they are changed drastically with time and space. The statistics serve to align the thought, based on which social scientists need to understand the prevailing equation to project the unforeseen future. The trajectory of the future world helps in planning and policymaking with a scientific direction. The practitioners of all academic disciplines under the umbrella of the social sciences need a common platform to exchange ideas that may be effective in the sustainable management of the crisis and the way forward after it is mitigated. This book provides multidisciplinary contributions for expressing the solidarity of academic knowledge to fight against this global challenge. It is crucial that there should be an on-going discussion and exchange of ideas, not only from the perspective of the current times but keeping in view the preparedness for unforeseen post-COVID crises as well.

At the height of its power around 1800, the English East India Company controlled half of the world's trade and deployed a vast network of political influencers at home and abroad. Yet the story of the Company's beginnings in the early seventeenth century has remained largely untold. Rupali Mishra's account of the East India Company's formative years sheds new light on one of the most powerful corporations in the history of the world. From its birth in 1600, the East India Company lay at the heart of English political and economic life. The Company's fortunes were determined by the leading figures of the Stuart era, from the monarch and his privy counselors to an extended cast of eminent courtiers and powerful merchants. Drawing on a host of overlooked and underutilized sources, Mishra reconstructs the inner life of the Company, laying bare the era's fierce struggles to define the difference between public and private interests and the use and abuse of power. Unlike traditional accounts, which portray the Company as a private entity that came to assume the powers of a state, Mishra's history makes clear that, from its inception, the East India Company was

embedded within—and inseparable from—the state. *A Business of State* illuminates how the East India Company quickly came to inhabit such a unique role in England's commercial and political ambitions. It also offers critical insights into the rise of the early modern English state and the expansion and development of its nascent empire.

Environmental pollution is one of the major problems faced by the world community, especially in the cities of the developing countries which have experienced unbridled growth of population, urbanisation and industrialisation. Soil, forests, mines, water, air and other natural resources are productive assets of an economy. These natural and environmental resources are the basis of all economic activities. Economic activities, in turn, affect the quantity and quality of natural and environmental resources. Mining, lumbering, manufacturing, fishing and a host of other economic activities change the stock of natural resources which calls for appropriate trade-off between the needs of the present and future generations. India is the second most populous and seventh largest country in the world. Geographically, it accounts for a meagre 2.4 percent of the world's total surface area but supports and sustains a whopping 16.7 percent of the world population. Environmental problems in India can be classified into two broad categories: (a) those arising from conditions of poverty and under-development, and (b) those arising as negative effects of the very process of development. The present volume contains 12 research papers -- authored by experts in the field of environmental economics -- which provide deep insights into the linkages between development and environment and suggest remedial measures for environmentally sustainable economic policies.

emerging markets in developing economies will rise before leveling off. It details global prospects and policies, including risks to the forecast, and essential determinants of long-term economic growth: labor force participation in advanced economies, the declining share of manufacturing jobs globally and in advanced economies, and the process through which innovative activity and technological knowledge spread across national borders.

After liberalization in the 1990s, growth rates were higher but were more volatile. The countries that did manage to sustain a high rate of growth followed a pragmatic reform path, which was neither a pure market nor a government-led approach. However, such pragmatic reform requires a deep knowledge of the economy derived from careful fact-based research. This volume contributes to the required knowledge on a range of issues such as drivers of growth, domestic reforms compared to external reforms, macroeconomic policy coordination, macroeconomic policy institutions and practices, the effect of openness and of global economic integration, poverty and the degree of inclusion, bottlenecks in infrastructure, and the performance of major sectors such as agriculture, industry and finance. The essays provide a finer understanding of the interaction between domestic strengths, external opportunities and government interventions.
