From its very beginning, legal informatics was mostly limited to the study of legal databases, but very early on, the Institute of Legal Information Theory and Techniques (ITTIG) started being involved with the specific topic of the Jurix conference, namely knowledge-based systems. This book includes programmatic papers with precise accounts of applications and prototypes. In many domains the focus has changed. For instance, research in retrieval has moved from classical Boolean systems into the management of documents in the Web. It addresses in particular standards and methods for embedding machine readable information into such documents and search methods that deal with heterogeneous

Read Online Intelligence Support Systems For Lawful Interception

information. Similarly, with regard to legal concepts, the focus has moved from thesauri to ontologies or to techniques for the automatic extraction of concepts from natural language texts. In the domain of legal reasoning merely deductive inferences have been expanded with models of legal argumentation, dialogue and mediation. The conference Logica, informatica e diritto 1981 and Jurix 2008 share the connection between theoretical models and the development of applications and prototypes. However, while in 1981 one could mostly see a juxtaposition of papers in legal theory and papers in computer applications, in 2008 we can see how discussions of issues in legal theory are embedded

Read Online Intelligence Support Systems For Lawful Interception

within contributions to legal informatics. This shows how research in legal informatics is increasingly becoming an autonomous domain of scientific inquiry by creatively incorporating and developing knowledge and methods from the two disciplines from which it originates (legal theory and computer science), while preserving links with them.

Humans have always been hopeless at predicting the future...most people now generally agree that the margin of viability in prophecy appears to be 1 ten years. Even sophisticated research endeavours in this arena tend to go 2 off the rails after a decade or so. The computer industry has been particularly prone to

Read Online Intelligence Support Systems For Lawful Interception

bold (and often way off the mark) predictions, for example: 'I think there is a world market for maybe five computers' Thomas J. Watson, IBM Chairman (1943), 'I have traveled the length and breadth of this country and talked with the best people, and I can assure you that data processing is a fad that won't last out the year' Prentice Hall Editor (1957), 'There is no reason why anyone would want a computer in their home' Ken Olsen, founder of DEC (1977) and '640K ought to be enough for anybody' Bill Gates, CEO Microsoft (1981). 3 The field of Artificial Intelligence - right from its inception - has been particularly plagued by 'bold prediction syndrome', and often by leading practitioners who should know better. AI has

because it examines the necessary legal background for building such systems. It will be an essential reference for the prospective builders of intelligent legal support systems. and □ John Zeleznikow, La Trobe University, Bundoora, Australia

Digital forensics deals with the acquisition, preservation, examination, analysis and presentation of electronic evidence. Networked computing, wireless communications and portable electronic devices have expanded the role of digital forensics beyond traditional computer crime investigations. Practically every crime now involves some aspect of digital evidence; digital forensics provides the

Read Online Intelligence Support Systems For Lawful Interception

techniques and tools to articulate this evidence. Digital forensics also has myriad intelligence applications. Furthermore, it has a vital role in information assurance - investigations of security breaches yield valuable information that can be used to design more secure systems. Advances in Digital Forensics describes original research results and innovative applications in the emerging discipline of digital forensics. In addition, it highlights some of the major technical and legal issues related to digital evidence and electronic crime investigations. The areas of coverage include: Themes and Issues in Digital Forensics Investigative Techniques Network Forensics Portable Electronic Device Forensics Linux
