S. Chand ' s Mathematics books for Classes IX and X are completely based on CCE pattern of CBSE. The book for Term I covers the syllabus from April to September and the book for Term II covers the syllabus from October to March.

This book is actually a sentinel of love. The cacophonous chatter, sharing of experiences, lessons learnt by each other all so robustly, so patiently developed this fetish for writing of this mother and daughter duo. How we envision our children carrying on with a legacy or a leisure and see them beautifully reciprocate the same is a miracle which is so heart warming. Hope that the words and the feelings strike a chord with everyone who reads them. The poems are on diverse virtues and experiences which in turn revolute to form this big gamut of life. In a world full of words this is our attempt from the heart to bring forth a pandora of contradictions. Happy reading to each one of you.

Researching Families and Children: Culturally Appropriate Methods highlights methodological issues that arise while conducting research on human development in India. This compilation deals with the dynamics of transacting research in the field, instead of providing formalized instructions on how to conduct research. This set of essays thus scores over most other books on

research methodology in this regard. Dwelling on authentic encounters in the field, the authors articulate the various processes of interaction, while providing transparency in procedure and practicality in approach. A significant aspect of the collection is the inclusion of the perspectives of the participants in research studies. The people studied are seen as partners in the creation of knowledge, without whose active involvement the studies would be inadequate. With a view to demystifying research methods and engaging the reader, the narrative uses the tropes from the world of Indian theatre of the traditional Sutradhaar (Master of Ceremonies) and Vidushak (Jester). This strategy infuses a lighter note and serves to round-off each essay succinctly. Researchers and academicians working in the fields of human development, psychology, social work and related disciplines, will welcome this work as it validates indigenous qualitative research.

This book offers an engaging and comprehensive introduction to scientific theories and the evolution of science and mathematics through the centuries. It discusses the history of scientific thought and ideas and the intricate dynamic between new scientific discoveries, scientists, culture and societies. Through stories and historical accounts, the volume illustrates the human engagement and preoccupation with science and the interpretation of natural phenomena. It highlights key scientific breakthroughs from the ancient to later ages, giving us accounts of the work of ancient Greek and Indian mathematicians and astronomers, as well as of the work of modern scientists like Descartes, Newton, Planck, Mendel and many more. The author also discusses the vast advancements which have been made in the exploration of space, matter and genetics and their relevance in the advancement of the scientific tradition. He provides great insights into the process of scientific experimentation and the relationship between science and mathematics. He also shares amusing anecdotes of scientists and their interactions with the world around them. Detailed and accessible, this book will be of great interest to students and researchers of science, mathematics, the philosophy of science, science and technology studies and history. It will also be useful for general readers who are interested in the history of scientific discoveries and ideas.

Energy usage and consumption continue to rise globally each year, with the most efficient and cost-effective energy sources causing huge impacts to the environment. In an effort to mitigate harmful effects to the environment, implementing clean energy resources and utilizing green energy management strategies have become worldwide initiatives, with many countries from all regions quickly becoming leaders in renewable energy usage. Still, not every energy resource is without flaws. Researchers must develop effective and low-cost strategies for clean energy in order to find the balance between production and consumption. The Research Anthology on Clean Energy Management and Solutions provides in-depth research that explores strategies and techniques used in the energy production field to optimize energy efficiency in order to maintain clean and safe use while delivering ample energy coverage. The anthology also seeks solutions to energy that have not yet been optimized or are still produced in a way that is harmful to the environment. Covering topics such as hydrogen fuel cells, renewable energy, solar power, solar systems, cost savings, and climate protection, this text is essential for electrical engineers, nuclear engineers, environmentalists, managers, policymakers, government officials, professionals in the energy industry, researchers, academicians, and students looking for the latest research on clean energy management.

A long-time chief data scientist at Amazon shows how open data can make everyone, not just corporations, richer Every time we Google something, Facebook someone, Uber somewhere, or even just turn on a light, we create data that businesses collect and use to make decisions about us. In many ways this has improved our lives, yet, we as individuals do not benefit from this wealth of data as much as we could. Moreover, whether it is a bank evaluating our credit worthiness, an insurance company determining our risk level, or a potential employer deciding whether we get a job, it is likely that this data will be used against us rather than for us. In *Data for the People*, Andreas Weigend draws on his years as a consultant for commerce, education, healthcare, travel and finance companies to outline how Big Data can work better for all of us. As of today, how much we benefit from Big Data depends on how closely the interests of big companies align with our own. Too often, outdated standards of control and privacy force us into unfair contracts with data companies, but it doesn't have to be this way. Weigend makes a powerful argument that we need to take control of how our data is used to actually make it work for us. Only then can we the people get back more from Big Data than we give it. Big Data is here to stay. Now is the time to find out how we can be empowered by it.
