This book assesses whether financial stability has been strengthened by the change in banks ' resolution policy with a focus on the bail-in. The book shows how banks changed their funding strategies, shrank their balance-sheets and relied more on deposits. The book will discuss inter-alia the mis-selling of bonds, which happened during 2012-2013, analysing whether the bond allocation changed after the bail-in launch. It discusses how the bail-in mechanism was deemed credible by equity holders and argues that the European case would have useful implications for third countries. Finally, the book relates this discussion to the possible collateral effects generated by the new resolution policy during and after the COVID-19 crisis, which will be of particular interest to researchers and policymakers in banking and financial institutions.
