This book would be highly useful for \* graduates who are going to join industry soon and would want to distinguish themselves right from day one, and \* students aiming to be better software engineers and at par with professionals right from college days. There is a huge gap between how things

are taught and learned in college and the way they are applied in industry. For example, one hardly considers aspects like scalability, readability, maintainability, portability, reusability, security concerns, performance, space and time complexity, or even readability while writing code in college. For most of the students, the main objective is just to display the correct output. After all, that's what you would be evaluated upon. However, these--and more--aspects are crucial when you take the responsibility of writing or evaluating code at a reputed organization whose image is at stake with every single line of code being added to its repository. This book aims to help students understand and realize how the things are done in a more professional manner in the industry and make a smooth transition from

Why you need a writing revolution in your classroom and how to lead it The Writing Revolution (TWR) provides a clear method of instruction that you can use no matter what subject or grade level you teach. The model, also known as The Hochman Method, has demonstrated, over and over, that it can turn weak writers into strong communicators by focusing on specific techniques that match their needs and

by providing them with targeted feedback. Insurmountable as the challenges faced by many students may seem, The Writing Revolution can make a dramatic difference. And the method does more than improve writing skills. It also helps:

- Boost reading comprehension
- Improve organizational and study skills
- Enhance speaking abilities
- Develop analytical capabilities

The Writing Revolution is as much a method of teaching content as it is a method of teaching writing. There's no separate writing block and no separate writing curriculum. Instead, teachers of all subjects adapt the TWR strategies and activities to their current curriculum and weave them into their content instruction. But perhaps what's most revolutionary about the TWR method is that it takes the mystery out of learning to write well. It breaks the

writing process down into manageable chunks and then has students practice the chunks they need, repeatedly, while also learning content.
