Machines and computers are becoming increasingly sophisticated and self-sustaining. As we integrate such technologies into our daily lives, questions concerning moral integrity and best practices arise. A

changing world requires renegotiating our current set of standards. Without best practices to guide interaction and use with these complex machines, interaction with them will turn disastrous. Machine Law, Ethics, and Morality in the Age of Artificial Intelligence is a collection of innovative research that presents holistic and transdisciplinary approaches to the field of machine ethics and morality and offers up-to-date and state-of-the-art perspectives on the advancement of definitions, terms, policies, philosophies, and relevant determinants related to human-machine ethics. The book encompasses theory and practice sections for each topical component of important areas of human-machine ethics both in existence today and prospective for the future. While highlighting a broad range of topics including facial recognition, health and medicine, and privacy and security, this book is ideally designed for ethicists, philosophers, scientists, lawyers, politicians, government lawmakers, researchers, academicians, and students. It is of special interest to decision- and policy-makers concerned with the identification and adoption of human-machine ethics initiatives, leading to needed policy adoption and reform for human-machine entities, their technologies, and their societal and legal obligations.

This has sparked a global debate on how to regulate AI and robotics ("governance of algorithms"). This book discusses both of these key aspects: the impact of algorithms, and the possibilities for future regulation.

Now, the Swift and Sure Anti-Crime Bill guarantees a previously convicted violent criminal one fair trial, one quick appeal, then immediate execution. To prevent abuse of the law, a machine must be built that detects lies with 100 percent accuracy. Once perfected, the Truth Machine will change the face of the world. Yet the race to finish the Truth Machine forces one man to commit a shocking act of treachery, burdening him with a dark secret that collides

with everything he believes in. Now he must conceal the truth from his own creation . . . or face his execution. By turns optimistic and chilling--and always profound--The Truth Machine is nothing less than a history of the future, a spellbinding chronicle that resonates with insight, wisdom . . . and astounding possibility. In 2009, Harvey A. Silverglate, a prominent criminal defense and civil liberties lawyer, published his landmark critique of the federal criminal justice system, Three Felonies a Day: How the Feds Target the Innocent. In 2014, Sidney Powell, a former federal prosecutor in three districts under nine United States Attorneys from both political parties and who has been lead counsel in 500 federal appeals, published her landmark indictment of the system, Licensed To Lie: Exposing Corruption in the Department of Justice, after she witnessed appalling abuses by prosecutors—more than a decade after she entered private practice. Now these two leading authorities have combined their knowledge, experiences, and talents to produce a much-needed and long-awaited blueprint for reforming the way business is conducted within the Department of Justice and in the federal criminal courts. Both Powell and Silverglate decided to join forces to write this essential and long-awaited book in order to answer the questions and the challenges that each of them has faced over the past several years: "OK," they've been told. "We understand your criticisms. Now how about telling us what has to be done to restore justice to federal criminal justice." This collaboration is their response.

On November 19, 1916, Ruth Law took off on a flight that aviation experts thought was doomed: she set off to fly nonstop from Chicago to New York City. Sitting at the controls of her small bi-plane, exposed to the elements, Law battled fierce winds and numbing cold. When her engine ran out of fuel, she glided for two miles and landed at Hornell, New York. Even though she fell short of her goal, she had broken the existing cross-country distance record, and with her plane refueled, she got back in the air and headed for New York City where crowds waited to greet her.
