This comprehensive collection documents the major processes, performance, institutions, problems and policies associated with global political economy. For the first time in a single volume, the authors present a detailed analysis of the changing distribution and production of wealth throughout the world, different measures of performance, the global technological revolution, long waves in the world economy and a special study of Asia and Eastern Europe in the world system.

The True Wealth of Nations arises from the conviction that implementing a morally adequate vision of the economy will generate sustainable prosperity for all. It sets forth the beginnings of an architecture of analysis for relating economic life and Christian faith-intellectually and experientially-and helps social scientists, theologians, and all persons of faith to appreciate the true wealth of any nation.

With consultation of Dr. Helen Boucher, Drs. Libman and Younsouni have put together an issue that provides current updates on a wide range of topics in tropical medicine. They have enlisted top experts from around the world to offer their expertise on state-of-the-art diagnosis, treatment, and management. The clinical reviews in this issue are devoted to: Tropical Diseases: Definition, Geographic Distribution, Transmission, and Classification; Venomous Bites, Stings, and Poisoning; What's New in Management in the Management of Malaria; Human African Trypanosomiasis; American Trypanosomiasis; Leishmaniasis Recent Developments in the Diagnosis and Management; Enteric Infections: New Paradigms for Causality and Key Pathogens; Enteric Infections: New Paradigms for Morbidity; Strongyloides, the Neglected NTD: Current Concepts for Screening, Diagnosis, and Treatment; Cysticercosis: State-of the Art Management; Arboviruses and Viral Hemorrhagic Fevers; Laboratory Diagnosis of Tropical Infections; Diagnostics During Public Health Emergencies: Lessons from Ebola and Zika; Antimicrobial Resistance; Migration Medicine in 2018; and Richettsiosis: Practical Update. Readers will come away with the information they need to make clinical decisions with confidence.

In this issue of Veterinary Clinics: Small Animal Practice, guest editor Dr. Aaron Smiley brings his considerable expertise to the topic of Telemedicine. Given the sudden and surprising challenges brought forth by the COVID-19 pandemic, it is more important than ever for practicing veterinarians to be up to date on the current best practices surrounding telehealth and small animal care. In this issue, top experts in the field explore the many nuances of implementing telehealth in veterinary practice, providing readers with the latest best practices in several key areas. Contains 11 practice-oriented topics including wearables, feline arthritis, oncology, anesthesia, technology, hospice, and more. Provides in-depth clinical reviews on telemedicine, offering actionable insights for clinical practice. Presents the latest information on this timely, focused topic under the leadership of experienced editors in the field. Authors synthesize and distill the latest research and practice guidelines to create clinically significant, topic-based reviews.

For many years, physicians and the public assumed that the discovery of new antimicrobial agents would outpace the ability of bacteria to mutate and develop drug resistance. Yet the development of new antibiotics has not kept up with bacterial evolution, especially since the late 1990's. At that time a multitude of pharmaceutical companies abandoned antibiotic research because of strong economic disincentives. For example, it is challenging for these companies to recuperate the investment (typically in the hundreds of millions of dollars) made in developing a new antibiotic, which is typically prescribed for a few days, compared to drugs that treat chronic conditions like heart disease or mental illness. This situation has led the U.S. federal government to take a more active lead in addressing antibiotic resistance. Recently, the White House announced an action plan that includes improving surveillance, developing better diagnostic tools, accelerating drug development, and improving global coordination of antibiotic resistance issues. Equally important is the \$1.2 billion dollars that has been pledged to fund these efforts. While we await the implementation of new policies, this issue of Infectious Disease Clinics of North America brings together leading authorities in the field of antibiotic resistance who discuss current issues including antibiotic stewardship, the changing role of the microbiology laboratory in determining antibiotic resistance in gram-negative pathogens, the continuing spread of metallo-β-lactamases, ESBLs and KPCs, antibiotic options for treating resistant gram-negative infections such as colistin and tigecycline, resistance mechanisms and new treatment options for Mycobacterium tuberculosis, emerging resistance mechanisms in aminoglycosides, issues with antibiotic resistance in immunocompromised patients, new β-lactamase inhibitors in the clinic, and resistance in VRE and Staphylococcus aureus. Additionally, combination therapy for resistant gram-negative infections has been advocated by some authorities and the advantages and disadvantages of this strategy will be reviewed.

Topics include: Why Economics Matters to Critical Care Clinicians, Overview of Health Economics: Basics Concept for Clinicians;Health Economic Methods; Costs of Critical Care Medicine; Economic Aspects of Sepsis and Severe Infections; Economic Aspects of Renal Failure and Acute Kidney Injury; Economic Aspects of Cardiovascular Disease; Economics of Mechanical Ventilation and Respiratory Failure and Comparative Effective Research and Health Care Reform.
